 - EJB

What's J2EE?

Java Platforms

□ J2SE:

 JAVA Standard Edition. It's normally for developing desktop applications.

□ J2EE:

 JAVA Enterprise Edition. It's built on top of the J2SE. It's normally for developing large-scale, multi-tiered, scalable, reliable, and secure network application.

☐ J2ME:

 JAVA Micro Edition. It's normally for developing applications on small devices, like mobile phones.

Why J2EE?

Characteristics of Enterprise Application

- Large scale
- Multi tiered
- □ Scalable
- □ Secure
- Reliable
- **□**

J2EE APIs & Technologies

- J2SE
- JAX-RPC
- Web Service for J2EE
- J2EE Management
- J2EE Deployment
- JMX
- JMS
- JTA

- Servlet
- JSP
- EJB
- JAXR
- Connector
- JACC
- JAXP
- JavaMail
- JAF

Platform Value to Developers

- ☐ Can use any J2EE implementation for development and deployment
- ☐ Vast amount of J2EE community resources
- ☐ Can use off-the shelf 3rd-party business components

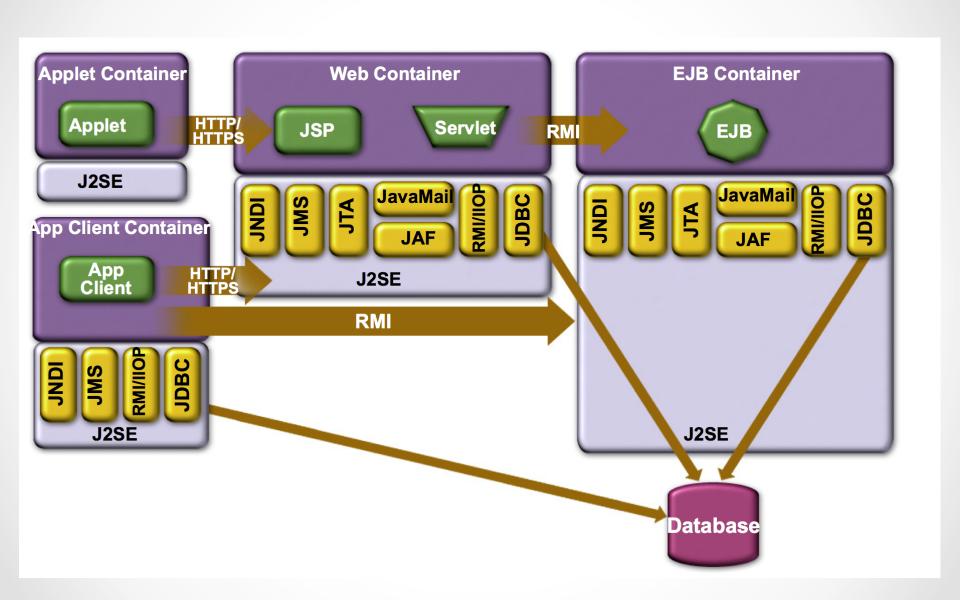

Platform Value to Vendors

- □ Vendors work together on specifications and then compete in implementations
- ☐ Freedom to innovate while maintaining the portability of applications
- Do not have to create/maintain their own proprietary APIs

Contents

 - ➤ Why J2EE
- J2EE Container & Component
- Critical Technologies of J2EE
 - Presentation Layer
 - Java Servlet & JSP
 - ➤ Business Logic Layer
 - EJB

J2EE Container & Component

Container Handle

- Concurrency
- Security
- Availability
- Scalability
- Persistence
- Transaction
- ☐ Life-cycle mgt.
- Management

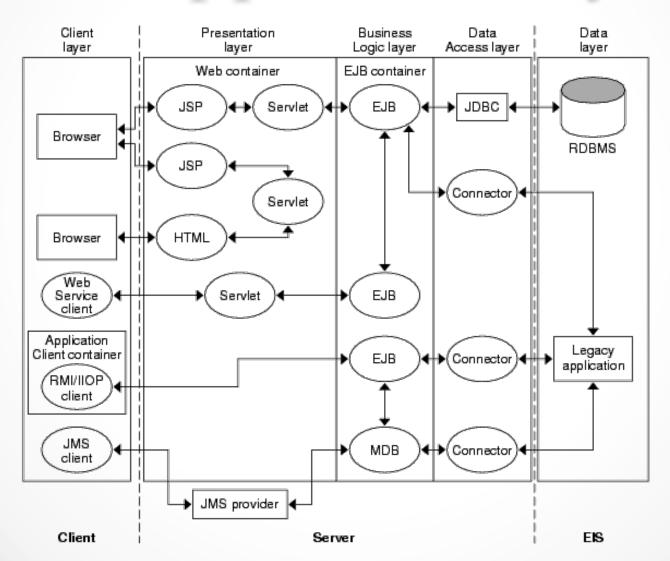

Component Handle

- Presentation
- □ Business Logic

 - Java Servlet & JSP
 - Business Logic Layer
 - EJB

J2EE application layers

Presentation Layer

- Java Servlet
- JavaServer Pages (JSP)

Java Servlet

- ◆ Java objects which extend the functionality of HTTP server
 - 1. Process or store data from submitted HTML form
 - 2. Provide dynamic content
 - 3. Maintain state information of a session

JSP

- Helps software developer to create dynamically generated web pages based on html or xml
 - 1. separate presentation from business logic
 - 2. can use JSP compiler to parse JSP into executable Java Servlet

Business Logic Layer

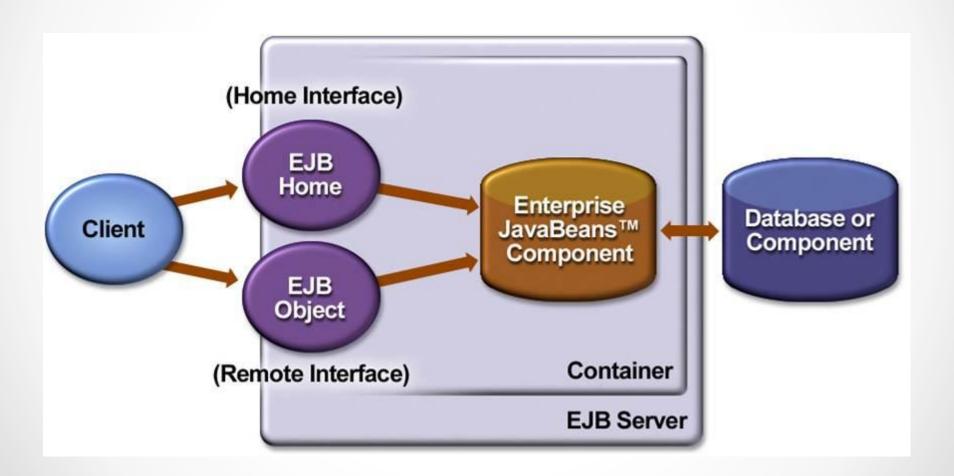

■ Enterprise Java Beans (EJB)

Enterprise Java Beans(EJB)

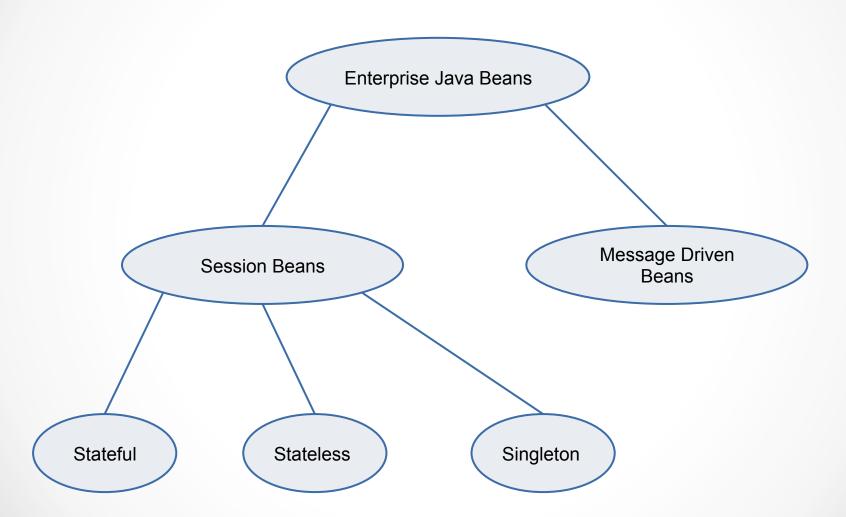

- ◆ A server side technology for modular construction of enterprise application
- provides a standard way to implement common concern in enterprise applications such as Transaction, Security, Persistence, Concurrency, Deployment ...

22

EJB Architecture

Types of EJB

Thank You!
